How did you decide on this industry?

I am a Chiropractic Doctor and I was a professional dancer for 28 years. I've always been intrigued by what technology out there can help reduce fat and help with pain as well. Something we all want and need. That's when I found this technology that does both. It has been a life changer for me and many of my patients. I retired 14 years ago as a Chiropractor and I do this full time and I LOVE IT!

Please provide a description of what the Westlake Body Contouring does.

Our State of the art technology was originally founded by NASA to treat wound healing in the military. We use 635nm & 880 nm LED lights. Our capacity to heal wounds is easy and we do it every day in our office by increasing collagen and elastin and decreasing the inflammation all from the LED Lights. However, Liquefying the fat is what's new. When the area of the body is treated with the light, the light actually penetrates the pores of the fat cell wall and liquefies the fat inside the cell. This causes the fat to exit the cell into the interstitial space and thus shrink the fat cell. Afterwards, the fat is carried through the lymphatic system where it eliminated from the body. The Light also tightens the skin by increasing collagen and elastin. So, you're losing fat and tightening the skin at the same time!

Are there side effects? What is the recovery time?

There are absolutely NO side effects beyond fat loss and no downtime. The treatment can be done on your lunch hour and you can return safely to work afterward. It's very relaxing as most of my patients actually sleep during the 25-minute treatment!

- No Down Time
- No pain
- No surgery
- No bruising

What is a typical course of treatments?

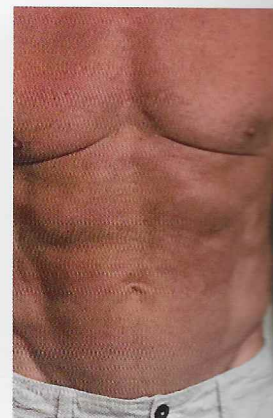

A typical course of treatments is usually 12 to 20 treatments.

Treatments are 25 minutes followed by a 10-minute vibration plate session.

Treatments can be done two to three times a week.

Contour Light Body Contouring before and after

Facial Rejuvenation before and after

How does the Contour Light differ from other treatments on the market today?

What makes our light different is that it's the only technology on the market that actually treats large surface areas all at once. We use 635 nm & 880 nm LED bulbs on our pads and no other devices on the market have this capability or this much power! Moreover, we have a patented reflective coating on the pads that increase the light energy and redirects the light into the body tissue.

Besides Body Contouring, what are the other treatments that you offer?

Facial rejuvenation with our face mask of LED Lights, This includes: rejuvenation, acne, rosacea, fine lines and wrinkles

Chronic Pain for anything from arthritis, Rheumatoid Arthritis, open wounds, post-operative incision and pain, diabetic neuropathy, diabetic wound healing and many other things as well as just simple back pain, knee pain, it works great on concussions and much more! *The NFL is now using the light for Brain Trauma and concussion.
